EARTH DAY

45<sup>th</sup>

anniversary

IT'S OUR TURN TO LEAD.

10

[days]

10

[hours]

10

[mins]

THE ISSUE

Today, people everywhere are experiencing first-hand the devastating consequences of countries polluting their way to the top. Populations worldwide are in immediate danger, making it more urgent to act than ever before.

We must come together and inspire our communities to do their part in securing a healthy and sustainable future for the planet.

How can I get involved?

## IT'S OUR TURN TO LEAD.

45<sup>th</sup> anniversary

2015 could be the most exciting year in environmental history. The year in which economic growth and sustainability join hands. The year in which world leaders finally pass a binding climate change treaty. The year in which citizens and organizations divest from fossil fuels and put their money into renewable energy solutions. These are tough issues but we know what's at stake is the future of our planet and the survival of life on earth. On Earth Day we need you to take a stand so that together, we can show the world a new direction. It's our turn to lead. So our world leaders can follow by example.

In 2015, let's redefine what progress looks like.

▼

### WHAT IS THE EARTH DAY NETWORK?

The first Earth Day on April 22, 1970, activated 20 million Americans from all walks of life and is widely credited with launching the modern environmental movement. The passage of the landmark Clean Air Act, Clean Water Act, Endangered Species Act and many other groundbreaking environmental laws soon followed. Growing out of the first Earth Day, Earth Day Network (EDN) works with over 22,000 partners in 192 countries to broaden, diversify and mobilize the environmental movement. More than 1 billion people now participate in Earth Day activities each year, making it the largest civic observance in the world.

Why it matters?

One billion people still live on less than \$1.25 per day. One of the biggest controversies over a treaty has been the issue that developing countries don't want to give up economic growth no matter the environmental cost, since the US and other devel-oped countries got to pollute their way to the top. Those most affected by climate change are low-income or marginalized populations. The Pacific Island nation of Kiribati, for example - one of the poorest places on Earth – was the first country to declare its land uninhabitable due to sea level rise from climate change, and has asked for help in evacuating its population. Even more people will fall into poverty and food will become more scarce if we don't stop our misuse of the plane.
